Q2 Run-Time

2 Points

```
// This method returns whether or not a pair of numbers,  
// num1 and num2, are between 1-m and 1-n, respectively  
boolean findPair(int num1, int num2, int m, int n) {  
    for (int i = 1; i <= m; i++) {  
        if (num1 == i) {  
            for (int j = 1; j <= n; j++) {  
                if (num2 == j) {  
                    return true;  
                }  
            }  
        }  
    }  
    return false;  
}
```

Q2.1 Worst Case Runtime

1 Point

What is the worst case runtime of findPair?

- ☒ $O(m+n)$
- ☐ $O(m*n)$
- ☐ $O(m/n)$
- ☐ $O(m)$
- ☐ $O(n)$

Q2.2 Best Case Runtime

1 Point

What is the best case runtime of findPair given it returns false?

- ☐ $O(1)$
- ☐ $O(m+n)$
- ☐ $O(m*n)$
- ☒ $O(m)$
- ☐ $O(n)$
